

Master of Science in Clinical Laboratory Science

Make a discovery in a lab. Make a difference in a life.

Think about it – making a clinical diagnosis or treating a disease almost always requires testing. That testing requires a clinical laboratory scientist.

You could help diagnose the flu, strep throat, diabetes or heart disease. You could provide safe, compatible components for a blood transfusion or assess the risk for future development of disease. Clinical laboratory scientists are at the heart of a full range of tests that provide information to keep people healthy.

If you want to make a difference in the lives of others and play an integral role in healthcare, then **UAB Clinical Laboratory Science** is for you.
