

Do you want to make a difference for kids?

More children are **at risk for type 2 diabetes**, and you can help us learn why.

Type 2 diabetes is diagnosed when the body has problems with high blood sugar levels. This can lead to serious health problems if not identified and treated early.

DISCOVERY is a study for children **9-14 years old** who may be at higher risk of developing type 2 diabetes.

What will happen in the study?

- In person and phone visits
- Lab tests
- Questionnaires
- Physical exams
- Glucose (blood sugar) monitors

Join families across the US to help us make a difference for all children and young people!

**This study does not involve medications and there is no cost to you.
You will be compensated for your time in this study.**
